

Subject: How do I clean out and service my MagDrive HHO generator???

It Is a very easy 10 minute process, just follow the simple directions.

- 1, Turn off unit, remove A-Trap fill plug.
- 2, Drain unit using drain plug located on bottom of HHO gen.
- 3, Flush with water and allow to drain.
- 4, Install drain plug and fill the A-trap with vinegar.
- 5, Re-install the A-Trap fill plug, top off reserve tank, you are good for another 2 – 3 months miles.

You are using Distilled White Vinegar a common food item containing distilled water [potable] and a 5% acedic acid solution, meaning no toxic chemicals. The vehicle exhaust according to all certified emissions reports are substantially greener than anything now required by law concerning emissions.

So although all MagDrive units come in color coded models, they all are in essence

"REALLY GREEN ECOLOGICALLY".
